

P97 6Watt Audio Mixer/Booster

SUGGESTED INSTALLATION OF ACTION UNITS IN TID TUG FOR MR JOHN DOWLING (Ver 1)

Rx Connections:

1. P79 to Throttle channel*
2. Rudder servo to Steering Channel (not shown)
3. P44 to Aux Channel 1; Operates Steam Whistle in one direction of stick (non-latching) and smoke in the opposite direction (latching)
4. P92 3-wire "servo" type lead is 5v supply for Rx; eliminates the need for a separate Rx battery pack.

*If required, a P68S Fan Controller can be connected in parallel with the P79 to the throttle channel. Fit the fan underneath the smoke unit to "blow" the smoke up through the funnel. Volume of smoke increases as you open the throttle.
